

Safehaven Infection and Outbreak Surveillance

At Safehaven, we strive to provide the highest quality of care for our clients and families and place client safety as a strategic objective. Healthcare-associated infections occur at all levels of healthcare facilities including within community healthcare organizations, such as Safehaven. Therefore, we maintain a commitment to work with our community partners, such as Public Health agencies, to implement measures to prevent the spread of infections and report our rates to the public. Since July of 2016, Safehaven has been tracking confirmed healthcare-associated infections across the organization.
