

01. Eat Alone & Eat Outside whenever possible

If space is unavailable or there is inclement weather, please find a secluded place to eat alone. Group meals are not encouraged at this time. Eating alone reduces the likelihood of transmission through spit or food particles.

02. Perform proper Hand Hygiene

Please ensure you perform proper hand hygiene before and after every meal. Keep in mind that HH can be successful using sanitizer or soap and water.

03. Appropriately doff your mask

Ensure that you doff your mask onto a clean surface (i.e., an unused napkin) and leave the mask face up so the part that covers/touches your mouth remains germ/virus free.

04. Clean the space

Once you finish eating, please clean the area and surfaces where you ate. High touch cleaning is to be done twice a day or as needed - as eating is a likely place for transmission, please use your wipes and allow for the proper dwelling period.

05. Appropriately don your mask

Once you are done, practice proper hand hygiene and don your mask or a new mask.
